

AUTOMIC

Discussion System

SYAMIC.E081217 BRÄHLER ICS is committed to continually improving its products and so reserves the right to make technical modifications without notice.

Description

The new AUTOMIC is a stand-alone easy to use microphone system for conferences. It includes all the benefits from the analog DIGIMIC® system, that is successfully in operation for decades worldwide.

Apart from the modern design of the microphone unit for the conference delegate, its flexibility and reliability, AUTOMIC is now also immune to radio-interference of mobile communication devices such as mobile phones, WLAN- or Bluetooth-Laptops.

The new AUTOMIC is fully compatible with the analogue DIGIMIC® system and can be used with its components without restrictions.

The APad microphone switchboards for easy and fast operation of up to 99 delegates' units can be integrated into the system at any position. This feature enables operators to control the system from various positions in the conference room.

System components

ACen Central Control Unit

For direct connection of up to 100 delegate units.
