

CDS200 II

Basic System

SYCD501_B.E.081217 BRÄHLER ICS is committed to continually improving its products and so reserves the right to make technical modifications without notice.

Description

The basic function of CDS200 II (Congress Data System®) is an easy to use stand alone microphone management system.

The shown basic version is a discussion system with microphone functionality (DIGIMIC®). It consists of the central control unit DPS202 with the connected delegate units DC10 and/or EDC10.

All system parameters are controlled and displayed at the central control unit on a background illuminated display. Several microphone operating modes are implemented and selectable, e.g. to limit the number of activated microphones at the same time up to 6 (AUT6). Also the allocation of a priority function (PRIO) for the chairman's unit is possible.

The delegates' unit has a high quality microphone and a loudspeaker for decentralised sound. It is switched off when the corresponding microphone is activated.

All units are connected in single-cable technology. About 160 units may be connected to one central control unit.

While developing attention was paid to compactness and a good price/performance relation. A simple operation rounds off this version of the system.

System Components

DPS202 Central Control Unit for controlling and supplying of up to 160 system units

DC10 Delegates' Unit with illuminated microphone button

EDC10 Delegates' Unit built-in version

TM58/6 Conference Microphone with ring-shaped live indicator, gooseneck

S8G/1+3 Distributor

A9 cable (S8G-connector II)

Optional

BC202/50 Microphone Control Panel (04.0460) to control up to 50 microphone units

BC202/100 Microphone Control Panel (04.0465) to control up to 100 microphone units

MicControl Software (S4.1301) for microphone control
