

DIGIVOTE®III

Wireless Response System, interactive

BRÄHLER ICS is committed to continually improving its products and so reserves the right to make technical modifications without notice.

Description

DIGIVOTE®III is a wireless response system that offers various modes in order to guarantee the necessary feedbacks of the participants. The following decision procedures can be realized:

- Traditional voting modes like yes/no/abstain and for/against
- Information gathering and testing: multiple choice, ranking by order of preference, opinion polling and more
- Segment results analysis for individual results or group/team comparisons and contrasts
- Game show-style shoot-outs, weighted voting, election results

Armed with Digivote's wireless voting units, participants can respond throughout the meeting and see their input displayed instantaneously on a video screen using high-impact graphics.

In addition to its own high-impact graphics, Digivote can integrate a organization's logo or any Windows®-based electronic image you provide.

System Components

Windows PC
with Windows® XP
